PROFESSIONAL SUMMARY

Software Developer with nearly 4 years of experience, focused on .NET and C#. I build enterprise web applications with ASP.NET Core Web API and Angular. Experienced in data modeling, querying and performance optimization on MSSQL and PostgreSQL, and in REST-based APIs and system integrations. I have worked on caching and messaging with Redis and RabbitMQ, and on centralized logging and monitoring with Serilog and Seq. From January to March 2026 I was the main developer of VMeet, an AI-powered meeting assistant built end to end with Flutter and Supabase.

TECHNICAL SKILLS

Backend: C#, .NET, .NET Core, ASP.NET Core Web API (.NET 7/8), ASP.NET Core MVC, ASP.NET MVC (.NET Framework 4.6.1), REST API, SOAP, WCF, TypeScript (Deno)

Frontend / Desktop: Angular, AngularJS, JavaScript, jQuery, AJAX, HTML5, CSS3, Flutter, Dart, Riverpod

Databases: Microsoft SQL Server (MSSQL), PostgreSQL, Supabase, Oracle PL/SQL, MongoDB; data modeling, querying, performance optimization, Row Level Security

ORM / Data Access: Entity Framework (Code First / DB First), Dapper, LINQ

Messaging / Caching: RabbitMQ, Redis

AI / Integrations: DeepSeek (LLM), DeepL, Deepgram, Recall.ai, Stripe

Architecture / Principles: Microservices, Monolithic Architecture, SOLID, Design Patterns, OOP, Clean Code

Logging / Monitoring: Serilog, Seq

DevOps / Deployment: Docker, IIS, GitHub Actions

Tools: Git (GitHub, Bitbucket, TFS), Postman, DataGrip, DBeaver, Visual Studio 2022, VS Code

Other: SignalR, Elasticsearch, LDAP

WORK EXPERIENCE

Software Development Specialist | Dijital Kurye (Full-time)

December 2023 - December 2025 | Istanbul, Türkiye

- Handled the design and development of backend services with ASP.NET Core Web API (.NET 7/8) and built end-to-end application flows integrated with the frontend and database layers.
- Performed data modeling, querying and performance optimization on MSSQL and PostgreSQL; used Dapper and Entity Framework (Code First) for data access.
- Built Redis caching layers, including caching of frequently used reference data such as provinces, districts and neighborhoods. Integrated RabbitMQ messaging to support high-performance data processing.
- Set up centralized logging with Serilog and Seq; handled error tracking and performance monitoring.
- Ran API tests and debugging with Postman and performed checks to keep services stable.
- Supported development and deployment with Docker Desktop and IIS; managed remote access workflows via OpenVPN and FortiClient.
- Took an active role in development and integration work on projects with Turkcell, Türk Telekom, Vodafone, Sipay, Millenicom and ÜNLÜ & Co.

Mid-Level Software Developer | Nar Bilişim Digital Web Agency (Full-time)

November 2021 - July 2023 | Istanbul, Türkiye

- Built controllers, views, classes and interfaces from scratch with C#, ASP.NET Framework MVC (4.6.1) and ASP.NET Core Web API, following Clean Code practices.
- Designed relational data structures on MSSQL and PostgreSQL for monolithic and microservice architectures; managed DDL, DML and DCL processes.
- Integrated pages with Angular; built dynamic screens with JavaScript, jQuery and AJAX.
- Used Redis caching for selected data and scenarios in projects.
- Managed version control with Git, GitHub and TFS; worked within team development workflows.

Software Engineering Intern | Dumankaya A.Ş.

January 2016 - August 2016

- Supported operations using Microsoft Dynamics AX, C# and MS Office tools.

PROJECTS

VMeet - AI Meeting Assistant

January 2026 - March 2026 | Main developer (small team project)

- Did most of the development of a desktop app (Windows, macOS, Linux) that records meetings, translates them in real time and summarizes them with AI. Worked in a Flutter and Riverpod codebase of about 41,000 lines of Dart; the interface supports Turkish, English and Spanish.
- Developed online meeting participation through a Recall.ai bot, meeting summaries and key decisions with DeepSeek, translation with DeepL, and an AI chat over meeting data (dashboard chat).
- Designed the data model on Supabase (PostgreSQL, Auth, Realtime, Storage): 22 Row Level Security policies, an audit log table and performance indexes for data security and query speed.
- Wrote 9 Deno/TypeScript Edge Functions covering bot scheduling, webhook handling, summary generation, calendar sync and Stripe payment flows.
- Designed Free, Pro and Business subscription plans with per-minute usage limits, and a persistent cache table for Google and Outlook calendar data.
- Configured GitHub Actions workflows for tests and security scanning, plus Dependabot.

Technologies: Flutter, Dart, Riverpod, Supabase, PostgreSQL, Deno, TypeScript, Stripe, Recall.ai, DeepSeek, DeepL, Deepgram, GitHub Actions

TCDD Transportation - Web Platform

- Worked on backend and frontend development with .NET Core 6.0 and Angular.
- Implemented PostgreSQL integration together with RabbitMQ and Redis integrations.
- Worked on LDAP user authentication and e-ticket service integration.
- Supported end-user testing and release processes.

Other Projects

Worked on projects for Üsküdar Municipality, Medexpert Clinic, Veritas CRO Clinical Research, Sign2Future and ECK Elektromekanik using .NET MVC 4.6.1, MSSQL, HTML, CSS, JavaScript, jQuery and Entity Framework Code First.

EDUCATION

B.Sc. Software Engineering | Istanbul Sabahattin Zaim University
2018 - 2021 | Istanbul (30% English-taught program)

B.A. Business Administration (Open Education) | Anadolu University
2016 - 2020 | Istanbul

Associate Degree, Computer Programming | Maltepe University
2014 - 2016 | Istanbul

Web and Mobile Qualified IT Specialist Program | Fenerbahçe University
November 2021 - April 2022 | Istanbul

- Program content: hands-on training in C#, ADO.NET, LINQ, Entity Framework, SQL Server and OOP.

CERTIFICATIONS

- Microsoft Certified: Azure Developer Associate

Udemy (courses taught in Turkish): Microservice Design Patterns with .NET; Microservices with .NET (.NET 9); ASP.NET Core + Redis / In-Memory; ASP.NET Core API + SignalR QR Code Order Management; ASP.NET Core Identity Membership System; AI Integrations with C# .NET; E-Commerce with ASP.NET Core API / Angular; RabbitMQ | .NET Core; Elasticsearch | .NET Core; Angular 8/9 + Node.js + MongoDB.

LANGUAGES

Turkish: Native | **English:** Good / Professional
